Lemon-Aid New Cars and Trucks 2012 Phil Edmonston 2011-01-01 Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling"

charge for \$25 worth of urea

Supermarine Spitfire Restoration Manual Paul Blackah 2014-02-01 The Spitfire remains one of the most iconic combat aircrafts of all time and to own an airworthy example of this classic fighter is the Holy Grail for many wealthy Warbird collectors. For an aircraft that first flew more than 70 years ago and which went out of production in the early 1950s, it may seem odd to discover that there is a flourishing industry centered on this aircraft in the 21st century. Scratch-building brand new Spitfires or restoring original examples to airworthy condition has become big business, with aircrafts changing hands for several million dollars apiece. Husband and wife author team Paul and Louise Blackah look into what is required to find a Spitfire that's suitable for restoration and then return it to the skies. With Paul's vast experience in restoring and maintaining the RAF BBMF's Spitfires, and both Paul and Louise's contacts in the aircraft restoration community, this promises to be a unique look inside the world of Spitfire building and restoration in the 21st century.

Lemon-Aid Used Cars and Trucks 2012–2013 Phil Edmonston 2012-05-19 Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda,

Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

The Hard Sell Evan Hughes 2022-01-18 The inside story of a band of entrepreneurial upstarts who made millions selling painkillers—until their scheme unraveled, putting them at the center of a landmark criminal trial. “A fast-paced and maddening account.... Until I read *The Hard Sell*, about the outrageous behavior of an obscure drug company, I hadn't appreciated the full extent of the filth or the dark stain the opioid sector has left on the entire industry.... What's most surprising and powerful about *The Hard Sell* is not one company's criminality—we've grown inured to corporations behaving badly—as much as how institutionalized these practices were across the modern drug industry.” —New York Times Book Review John Kapoor had already amassed a small fortune in pharmaceuticals when he founded Insys Therapeutics. It was the early 2000s, a boom time for painkillers, and he developed a novel formulation of fentanyl, the most potent opioid on the market. Kapoor, a brilliant immigrant scientist with relentless business instincts, was eager to make the most of his innovation. He gathered around him an ambitious group of young lieutenants. His head of sales—an unstable and unmanageable leader, but a genius of persuasion—built a team willing to pull every lever to close a sale, going so far as to recruit an exotic dancer ready to scrape her way up. They zeroed in on the eccentric and suspect doctors receptive to their methods. Employees at headquarters did their part by deceiving insurance companies. The drug was a niche product, approved only for cancer patients in dire condition, but the company's leadership pushed it more widely, and together they turned Insys into a Wall Street sensation. But several insiders reached their breaking point and blew the whistle. They sparked a sprawling investigation that would lead to a dramatic courtroom battle, breaking new ground in the government's fight to hold the drug industry accountable in

the spread of addictive opioids. In *The Hard Sell*, National Magazine Award–finalist Evan Hughes lays bare the pharma playbook. He draws on unprecedented access to insiders of the Insys saga, from top executives to foot soldiers, from the patients and staff of far-flung clinics to the Boston investigators who treated the case as a drug-trafficking conspiracy, flipping cooperators and closing in on the key players. With colorful characters and true suspense, *The Hard Sell* offers a bracing look not just at Insys, but at how opioids are sold at the point they first enter the national bloodstream—in the doctor's office.

Pricing Lives W. Kip Viscusi 2020-09-08 How society's undervaluing of life puts all of us at risk--and the groundbreaking economic measure that can fix it Like it or not, sometimes we need to put a monetary value on people's lives. In the past, government agencies used the financial "cost of death" to monetize the mortality risks of regulatory policies, but this method vastly undervalued life. *Pricing Lives* tells the story of how the government came to adopt an altogether different approach--the value of a statistical life, or VSL--and persuasively shows how its more widespread use could create a safer and more equitable society for everyone. In the 1980s, W. Kip Viscusi used the method to demonstrate that the benefits of requiring businesses to label hazardous chemicals immensely outweighed the costs. VSL is the risk-reward trade-off that people make about their health when considering risky job choices. With it, Viscusi calculated how much more money workers would demand to take on hazardous jobs, boosting calculated benefits by an order of magnitude. His current estimate of the value of a statistical life is \$10 million. In this book, Viscusi provides a comprehensive look at all aspects of economic and policy efforts to price lives, including controversial topics such as whether older people's lives are worth less and richer people's lives are worth more. He explains why corporations need to abandon the misguided cost-of-death approach, how the courts can profit from increased application of VSL in assessing liability and setting damages, and how other countries consistently undervalue risks to life. *Pricing Lives* proposes sensible economic guideposts to foster more protective policies and greater levels of safety in the United States and throughout the world.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Is America Falling Off the Flat Earth? Institute of Medicine 2007-09-14 The aviation and telecommunication revolutions have conspired to make distance increasingly irrelevant. An important consequence of this is that US citizens, accustomed to competing with their neighbors for jobs, now must compete with candidates from all around the world. These candidates are numerous, highly motivated, increasingly well educated, and willing to work for a fraction of the compensation traditionally expected by US workers. If the United States is to offset the latter disadvantage and provide its citizens with the opportunity for high-quality jobs, it will require the nation to excel at innovation—that is, to be first to market new products and services based on new knowledge and the ability to apply that knowledge. This capacity to discover, create and market will continue to be heavily dependent on the nation's prowess in science and technology. Indicators of trends in these fields are, at best, highly disconcerting. While many factors warrant urgent attention, the two most critical are these: (1) America must repair its failing K-12 educational system, particularly in mathematics and science, in part by providing more teachers qualified to teach those subjects, and (2) the federal government must markedly increase its investment in basic research, that is, in the creation of new knowledge. Only by providing leading-edge human capital and knowledge capital can America continue to maintain a high standard of living—including providing national security—for its citizens.
