The Police and International Human Rights Law Ralf Alleweldt 2018-02-20 This book provides an updated overview of current international human rights law relating to the police. Around the globe, the police have a special responsibility for the protection of human rights. Police work is governed by national rules and in addition, in today's world, by the evolving international human rights standards. As a result of the ever-developing case law of international courts and other bodies, the requirements of human rights law on policing have become more and more detailed and complex in recent years. Psychological Testing in the Service of Disability Determination Institute of Medicine 2015-06-29 The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

Politics and Pan-Africanism Dawn Nagar 2019-12-12 Offering an examination of the diplomatic and economic regional power structures in Africa and their relationships with each other, Dawn Nagar discusses the potential and future of pan-Africanism. The three primary regional economic communities (RECs) that are recognised by the African Union as the key building blocks of a

united Africa are examined - these are the Common Market for Eastern and Southern Africa (COMESA), the East African Community (EAC) and the Southern African Development Community (SADC). These RECS include Africa's major economies – Egypt, South Africa, and Kenya but are also home to Africa's most conflict prone and volatile states – the Democratic Republic of the Congo (DRC), Burundi, South Sudan, Somalia and Lesotho. Providing a detailed overview of the current relationship between these power blocs, this book provides insight into the current state of diplomatic and economic relations within Africa and shows how far there is to go for a future of Pan-Africanism.

Alan Kostelecky 2011 This book contains the Proceedings of the Fifth Meeting on CPT and Lorentz Symmetry, held at Indiana University in Bloomington from June 28 to July 2, 2010. The Meeting focused on tests of these fundamental symmetries and on related theoretical issues, including scenarios for possible violations. Topics covered at the meeting include searches for CPT and Lorentz violations involving: birefringence and dispersion from cosmological sources, clock-comparison measurements, CMB polarization, electromagnetic resonant cavities, equivalence principle, gauge and Higgs particles, high-energy astrophysical observations, laboratory and gravimetric tests of gravity, matter interferometry, neutrino oscillations, oscillations and decays of K, D, B mesons, particle-antiparticle comparisons, post-newtonian gravity in the solar system and beyond, second- and third-generation particles, space-based missions, spectroscopy of hydrogen and antihydrogen, and spin polarized matter. Theoretical discussions include physical effects at the level of the Standard Model, General Relativity, and beyond; the possible origins and mechanisms for Lorentz and CPT violations; and related classical and quantum issues in field theory, particle physics, gravity, and string theory.

As Resident Aliens Kathleen Kern 2010-01-01 "As the crucifixes drenched with Jewish blood drop from our hands, we stand impotent and wordless before this tragedy of Israel and Palestine . . . In the name of the crucified Messiah, we must struggle against the conditions which make history a trail of crucifixions. Only then, in solidarity with Jews and Palestinians, can we dream of Messianic times, of a shalom without victims." With these words, theologian Rosemary Radford Reuther laid out the pitfalls for Christians entering the arena of the Palestinian-Israeli conflict. Nevertheless, in 1995, a small cohort of pacifist Christians decided to

paddle against the currents of history, against the crusades, pogroms, and colonial enterprises of their co-religionists, toward that goal of "a shalom without victims." Setting up a project in the West Bank city of Hebron, over the next ten years Christian Peacemaker Teams forged relationships with Palestinians, Israelis, and internationals who were resisting the Israeli military occupation of Palestine. As "resident aliens" (See Exodus 23:9) they have sojourned in the Holy Land to support Palestinians and Israelis who reject violence as a means of solving the conflict, who think that one nation has no right to subjugate and exploit another, and who believe all the residents of the region are entitled to the same, exactly the same, human rights. This book charts the growth of CPT in Palestine, how it adapted to changing political conditions, spread to locations outside of Hebron, and developed networks with activists throughout Palestine and Israel.

Racial Criminalization of Migrants in the 21st Century Salvatore Palidda 2016-05-23 Over the last two decades in the West, there has been a significant increase in the arrest, imprisonment and detention of migrants. The racial criminalization and victimization of migrants and Roma people has led judicial authorities, local governments, the police, mass media and the general population to perceive migrants and 'gypsies' as responsible for a wide range of offences. Taking into consideration the political and cultural conditions that affect and interconnect societies of emigration and immigration, the contributors examine and compare a range of cases in Europe and the United States. The contributions demonstrate how the persecution of the 'current enemy' is the 'total political fact' of the 21st century in that it ensures consensus and business, or what might be termed the 'crime deal' of today. This provocative book has international appeal and will be a valuable resource for academics, researchers and policymakers with an interest in migration and social and ethnic control.

Feedback Systems Karl Johan Åström 2021-02-02 The essential introduction to the principles and applications of feedback

systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

European Penology? Tom Daems 2013-05-17 Is there something distinctive about penology in Europe? Do Europeans think about punishment and penal policy in a different way to people in other parts of the globe? If so, why is this the case and how does it work in practice? This book addresses some major and pressing issues that have been emerging in recent years in the interdisciplinary field of 'European penology', that is, a space where legal scholarship, criminology, sociology and political science meet - or should meet - in order to make sense of punishment in Europe. The chapters in European Penology? have been written by leading scholars in the field and focus in particular on the interaction of European academic penology and national practice with European policies as developed by the Council of Europe and, increasingly, by the European Union.

Life Imprisonment and Human Rights Dirk van Zyl Smit 2016-12-01 In many jurisdictions today, life imprisonment is the most severe penalty that can be imposed. Despite this, it is a relatively under-researched form of punishment and no meaningful attempt has been made to understand its full human rights implications. This important collection fills that gap by addressing these two key questions: what is life imprisonment and what human rights are relevant to it? These questions are explored from the perspective of a range of jurisdictions, in essays that draw on both empirical and doctrinal research. Under the editorship of two leading scholars in the field, this innovative and important work will be a landmark publication in the field of penal studies and human rights.

Strengthening Forensic Science in the United States National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of

adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The Optional Protocol to the UN Convention Against Torture Rachel Murray 2011-08-11 The Optional Protocol to the UN Convention Against Torture (OPCAT) establishes an independent international monitoring committee (SPT) which itself will visit states and places where persons are deprived of their liberty. It also requires states to set up independent national bodies to visit places of detention. This book, drawing upon events held and interviews with governments, civil society, members of UN treaty bodies, national visiting bodies and others, identifies key factors that have shaped the operation of these visiting bodies since OPCAT came into force in 2006. It looks in detail at the background to the adoption of the Protocol, as well as how the international committee, the SPT, has carried out its mandate in its first few years. It examines the range of places of detention that could be visited by these bodies, and the expectations placed on the national visiting bodies themselves. The book also places the OPCAT within the broader system of torture prevention in the UN and elsewhere and identifies a range of trends arising from the different geographical regions. As well as providing an insight into its work, this detailed examination of OPCAT also provides valuable lessons for other new human rights treaties such as the UN Convention on the Rights of Persons with Disabilities and the Convention on Enforced Disappearances, which have similar provisions concerning national mechanisms.
