Cam Plastometer Operation Manual Including Theory and Design M. J. Stewart 1974 "A Cam Plastometer is a compression testing machine used in studying the hot-working behaviour of metals. The deformation of cylindrical specimens is controlled by a shaped cam which maintains the true strain rate constant throughout the hot-working test. This report describes the recently completed Cam Plastometer at the Mines Branch, Ottawa, Canada. The theory of design and the operating procedures are also discussed. Tests can be conducted at constant strain rates between 0.1 and 160 per sec. The maximum load is 0.45 MN (100,000 lb) and the maximum test temperature is 1300° C"--Abstract, page i.
