Metric Handbook David Littlefield 2008-01-28 \* Take a look at the dedicated microsite for free sample content - [architecturalpress.com/the-metric-handbook](http://architecturalpress.com/the-metric-handbook) \* Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into the major handbook of planning and design data for architects. This new edition has been updated to account of the most recent changes to regulation and practice – in particular the increasing emphasis on environmental legislation - to meet the needs of the modern building design professional. The Metric Handbook deals with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each type the book gives the basic design requirements and all the principal dimensional data, as well as succinct guidance on how to use the information and what regulations the designer may need to be aware of. As well as buildings the Metric Handbook deals with broader aspects of design such as materials, acoustics and lighting, and general design data on human dimensions and space requirements. The Metric Handbook is a unique authoritative reference for solving everyday planning problems. It has sold well over 100,000 copies worldwide to successive generations of architects and designers – this is a book that truly belongs on every design office desk and drawing board.

Stairs Sylvia Blanc 2012-05-16 Stairs are a fundamental and universal feature of buildings. The late Alan Blanc had a lifetime's obsession with stairs and steps and provided a definitive reference source that bridges the aesthetic and practical aspects of staircase design. His wife Sylvia, who worked with him on the first edition, presents this updated, abridged version alongside a complimentary web site where the historical elements of the subjects are described and discussed in pictures and diagrams. The book is a practical guide to designing circulation spaces. It is extensively detailed with working drawings and photographs. Construction methods using a variety of materials are discussed as well as the influence of new technology on vertical circulation. The guidance on codes and regulations covers the UK and US. The latest high profile international case studies inspire and inform the reader.

Designing for the Disabled: The New Paradigm Selwyn Goldsmith 2012-09-10 Selwyn Goldsmith's Designing for the Disabled has, since it was first published in 1963, been a bible for practising architects around the world. Now, as a new book with a radical new vision, comes his Designing for the Disabled: The New Paradigm. Goldsmith's new paradigm is based on the concept of architectural disability. As a version of the social model of disability, it is not exclusively the property of physically disabled people. Others who are afflicted by it include women, since men customarily get proportionately four times as many amenities in public toilets as women - and women have to queue where men do not - and those with infants in pushchairs, because normal WC facilities are invariably too small to get a pushchair and infant into. To counter architectural disability, Goldsmith's line is that the axiom for legislation action has to be 'access for everyone' - it should not just be 'access for the disabled', as it presently is with the Part M building regulation and relevant provisions of the 1995 Disability Discrimination Act. In a 40-page annex to his book he sets out the terms that a new-style Part M regulation and its Approved Document might take, one that would cover alterations to existing buildings as well as new buildings. But architects and building control officers need not, he says, wait for new a legislation to apply new practical procedures to meet the requirements of the current Part M regulation; they can, as he advises, act positively now. This is a book which will oblige architects to rethink the methodology of designing for the disabled. It is a book that no practising architect, building control officer, local planning officer or access officer can afford to be without.
