Introduction to English Phonetics Richard Ogden 2017-02-06 The second edition of this distinguished textbook introduces undergraduates to the concepts, terminology and representations needed for an understanding of how English is pronounced around the world. Assuming no prior knowledge, this textbook guides the reader through the vocal tract and explains how the sounds of speech are made, offering an accessible and expanded introduction to areas including transcription, vowels and acoustic analysis. As far as possible, it uses naturally-occurring conversational speech so that readers are familiar with the details of everyday talk (and not just the careful pronunciations presented in dictionaries.) The book also includes a new concluding chapter that works through a piece of spoken data to show the reader how a more complete phonetic analysis can be conducted. Examples are taken from around the English-speaking world, including North America, Australia, New Zealand and varieties of British English. The book takes an open-minded approach to what sounds of English might be significant for making meaning, and highlights the significance of word meaning, morphology, sociolinguistics and conversational interaction in phonetic analysis.

Algorithmic Foundations of Robotics IX David Hsu 2010-11-18 Robotics is at the cusp of dramatic transformation. Increasingly complex robots with unprecedented autonomy are finding new applications, from medical surgery, to construction, to home services. Against this background, the algorithmic foundations of robotics are becoming more crucial than ever, in order to build robots that are fast, safe, reliable, and adaptive. Algorithms enable robots to perceive, plan, control, and learn. The design and analysis of robot algorithms raise new fundamental questions that span computer science, electrical engineering, mechanical engineering, and mathematics. These algorithms are also finding applications beyond robotics, for example, in modeling molecular motion and creating digital characters for video games and architectural simulation. The Workshop on Algorithmic Foundations of Robotics (WAFR) is a highly selective meeting of leading researchers in the field of robot algorithms. Since its creation in 1994, it has published some of the field's most important and lasting contributions. This book contains the proceedings of the 9th WAFR, held on December 13-15, 2010 at the National University of Singapore. The 24 papers included in this book span a wide variety of topics from new theoretical insights to novel applications.

This book concentrates on one local manifestation of the legend: a cult among the peasants of the Dombes, north of Lyons, who brought their sick child to the grave of 'Saint Guinefort', the martyred greyhound, for preservation from disease. Providing a rare access to the underlying cultural traditions of Europe, all too

often submerged in the survivals of literate culture, this book will be welcomed by a wide range of historians and anthropologists.

The Huguenots and French Opinion, 1685-1787 Geoffrey Adams 2006-01-01 The decision of Louis XIV to revoke the Edict of Nantes and thus liquidate French Calvinism was well received in the intellectual community which was deeply prejudiced against the Huguenots. This antipathy would gradually disappear. After the death of the Sun King, a more sympathetic view of the Protestant minority was presented to French readers by leading thinkers such as Montesquieu, the abbé Prévost, and Voltaire. By the middle years of the eighteenth century, liberal clerics, lawyers, and government ministers joined Encyclopedists in urging the emancipation of the Reformed who were seen to be loyal, peaceable and productive. Then, in 1787, thanks to intensive lobbying by a group which included Malesherbes, Lafayette, and the future revolutionary Rabaut Saint-Étienne, the government of Louis XVI issued an edict of toleration which granted the Huguenots a modest bill of civil and religious rights. Adams' illuminating work treats a major chapter in the history of toleration; it explores in depth a fascinating shift in mentalités, and it offers a new focus on the process of "reform from above" in pre-Revolutionary France.

Charms and Charming in Europe J. Roper 2004-11-12 Historical records of charms, the verbal element of vernacular magic, date back at least as far as the late middle ages, and charming has continued to be practiced until recently in most parts of Europe. And yet, the topic has received only scattered scholarly attention to date. By bringing together many of the leading authorities on charms and charming from Europe and North America, this book aims to rectify this neglect, and by presenting discussions covering a variety of periods and of locations - from Finland to France, and from Hungary to England - it forms an essential reader on the topic.

Herman Boerhaave (1668-1738) Rina Knoeff 2002 Herman Boerhaave, holder of three professorships in medicine, botany and chemistry at the University of Leiden, was one of the most important and famous medical teachers in Europe. Boerhaave was also known as a very religious man. Historians of science and medicine have stressed the mechanical aspects of his medicine. Boerhaave's natural philosophy - his chemistry and alchemy as well as their uses in medicine - and methodology are all rooted in his Calvinism. In particular, Boerhaave's ideas on the divine nature of fire, the chemical theory of menstrua and the idea of seminal principles demonstrate that Boerhaave presented a Calvinist picture of the world.
