Free to All Abigail A. Van Slyck 1995 Familiar Landmarks in hundreds of American towns, Carnegie libraries have shaped the public library experience of generations of Americans and today seen far from controversial. In Free to All, however, Abigail Van Slyck shows that the classical facades and symmetrical plans of these buildings often mask the complex and contentious circumstances of their construction and use. Free to All is the first comprehensive social and architectural history of the Carnegie library phenomenon, an unprecedented program of philanthropy that helped erect over 1600 public library buildings in the United States. Van Slyck skillfully untangles the overlapping and conflicting motives of the many people involved in erecting, staffing, and using the libraries: Andrew Carnegie himself; small-town civic boosters avid for new investment; metropolitan library trustees anxious to maintain the elite character of urban libraries; architects reacting to increased professional specialization; a growing number of female librarians; and the children and adults, frequently immigrants, who came to borrow books.

Handbook and Atlas of Curves Eugene V. Shikin 1995-04-27 The Handbook and Atlas of Curves describes available analytic and visual properties of plane and spatial curves. Information is presented in a unique format, with one half of the book detailing investigation tools and the other devoted to the Atlas of Plane Curves. Main definitions, formulas, and facts from curve theory (plane and spatial) are discussed in depth. They comprise the necessary apparatus for examining curves. An important and original part of the book is the Atlas, consisting of nearly 200 plane curve classes, more than 700 figures, and nearly 2,000 drawings of specific curves. The classes have been scrupulously chosen for their interesting and useful properties. The dynamics of each class is visually represented by a series of specially arranged precise drawings showing the qualitative change of a curve's behavior as the parameters defining the class vary. The book provides numerous application examples, descriptions of mechanisms for drawing various curves, and discussions of geometric spline possibilities. It includes more than 20 various geometric and linguistic indices and an update on world literature on curve theory. The Handbook and Atlas of Curves will be an invaluable reference for researchers, practitioners, students, and amateurs of mathematics.

A-7 Corsair Pilot's Flight Operating Manual United States Navy 2008-09-01 ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified 'restricted', the manual was recently declassified and is here reprinted in book form.

NATFREQ Users Manual Wilfred D. Iwan 1984 This manual describes a computer program that has been developed to calculate natural frequencies and mode shapes of taut cables with attached masses and spring-mass combinations. The equations of motion are solved by an iterative technique allowing accurate calculation even for extremely high mode numbers. The approach has the advantages that it is fast, accurate, and can easily accommodate a variety of system configurations including bodies attached to the cable. This document covers the theory used in the development of the code. Line-by-line descriptions of both the input and output data are given, and several examples illustrating the use of the program are included. Some of the difficulties that may be encountered when running large, complex problems are discussed and possible solutions proposed. The structure of the program is described in moderate detail. The program is written in a style which makes additions or modifications easy to implement. (Author). You Make the Difference 1980

Marketing for Entrepreneurs Jurgen Wolff 2012-12-27 Entrepreneurs are great at coming up with new ideas and, often by sheer passion alone, getting their business started. But for long-term success they must be aware of the secrets of marketing. Even if they don't always market their product themselves, they need to understand the processes enough to ensure that the job is being done well. The book identifies marketing as the entire process of researching, creating, distributing and selling the product or service. It isn't about theory and metrics; instead, it's a practical guide that starts with the basis of all marketing: the proper mindset. The book: de-mystifies branding, showing how it is never a process undertaken for its own sake (or for creating sexy brochures or websites), but in order to burn the uniqueness of the business into the minds of customers. offers an extensive toolkit that includes the power of outsourcing and networking and the latest techniques in establishing rapport, communicating with the use of questions, and the power of language patterns in speech and written copy. shows how to use both new and old media to best effect, with special attention to blogs, podcasts, viral videos, and social networking sites. shows how to put all of these elements together into a marketing master plan that you can formulate a one-year plan and then break down into a six-month, three month, and one month segments.
